*Parenting Practices & Discipline Strategies that
Support Positive Child Development*

Preventing

Promoting

Addressing

Webinar Goals

Provide information to early childhood caregivers and program staff about how to help parents address challenging behaviors of young children and identify discipline strategies that promote positive social development and emotional wellbeing.

Discuss practical, research supported strategies for preventing problems and effectively addressing challenging behaviors.

Provide participants information and resources to share with parents.

Discipline Defined

“The word discipline means to impart knowledge and skill – to teach.”

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2719514/>

“Discipline is a positive parenting approach to teach a child self-control and confidence. As opposed to punishment, discipline techniques focus on what it is we want the child to learn, and what the child is capable of learning. Discipline is a process, not a single act.”

Positive Guidance and Discipline, (November, 1998) Department of Family and Consumer Sciences
North Carolina Cooperative Extension Service North Carolina State University

Preventing

Promoting

Addressing

What is the difference between discipline and punishment?

Discipline	Punishment
Positive Focus-teaching	Negative Focus-stopping
Long-term goal	Short term
Build self-control	Increase obedience

Preventing

Promoting

Addressing

The Goals of Discipline

Teach self control
Build self-esteem
Develop competence
Increase self-efficacy
Develop problem solving skills
Promote self-discipline
Support Emotion-regulation
Increase ability to handle frustration
Learn responsibility
Develop self-respect and respect for others
Take initiative and be assertive
Foster social skills

Preventing

Promoting

Addressing

Conceptual Framework

According to the American Academy of Pediatrics (1998) effective discipline system must contain:

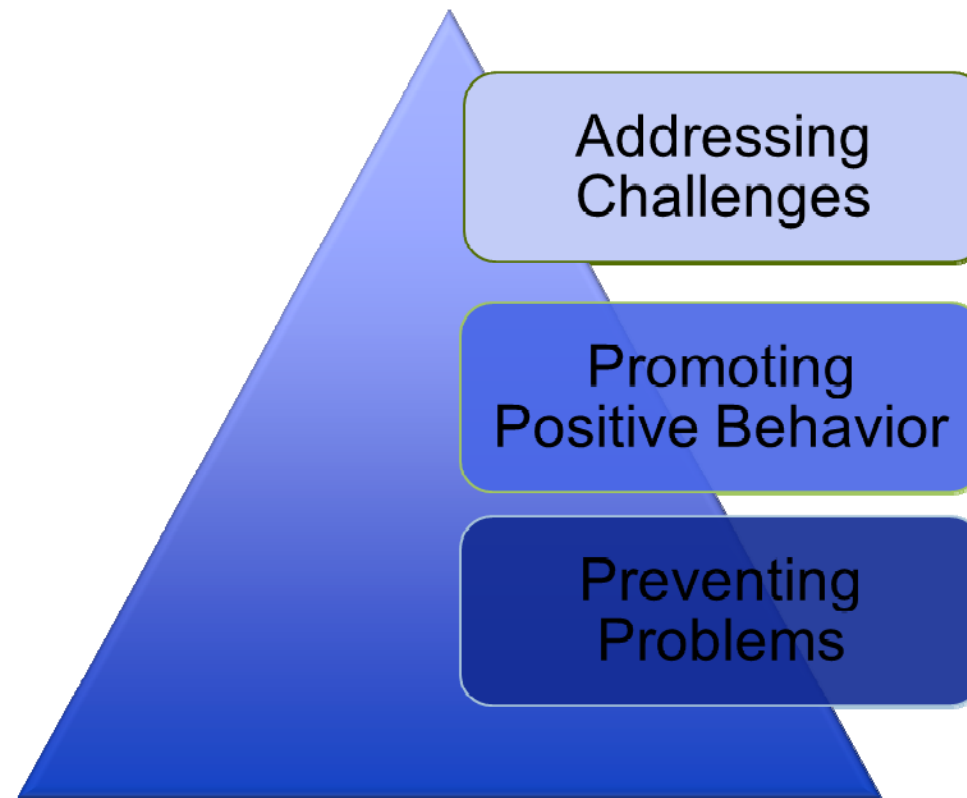

- 1) a learning environment characterized by positive, supportive parent–child relationships
- 2) a strategy for systematic teaching and strengthening of desired behaviors (proactive)
- 3) a strategy for decreasing or eliminating undesired or ineffective behaviors (reactive)

Addressing

RELATIONSHIPS ARE THE FOUNDATION

Preventing

Promoting

Addressing

Research

Stable and responsive relationships with caregivers and environments with consistent, nurturing, and protective interactions with adults that enhance children's ability to learn and help develop adaptive capacities.

Safe and supportive physical environments, free from toxins (including chemicals, dirty water, and poor sanitation) and fear

Appropriate nutrition and disease prevention, including immunization and health-promoting levels of food intake

Preventing

Promoting

Addressing

Research

Parents use aversive and non-aversive discipline practices on a regular basis by the time a child is 3 years old

Parent frustration predicts frequent use of everyday discipline in early childhood and use of aversive practices

Lower parent well-being ---- more frequent yelling and spanking

Preventing

Promoting

Addressing

Research

Consider aim of discipline: Harsh punishment methods do not teach skills or support strong parent-child relationships

Parenting practices that help children grow up mentally healthy, socially responsible, & prevent problem behaviors: (NASP)

1. Developing a trusting relationship
2. Developing Appropriate expectations
3. Setting limits
4. Offering encouragement and recognition

Preventing

Promoting

Addressing

Early Childhood

“There is growing evidence about how critical the early years are to a child's development. It is becoming increasingly clear that the development of the brain in the early years is a pathway that affects physical and mental health, learning, and behavior throughout the life cycle. Evidences show that children who are well nurtured during this period tend to do better in school and stand a better chance of developing the skills required to contribute productively to social and economic development”

Attachment

“Nurturing and stable relationships with caring adults are essential to healthy human development beginning from birth. Early, secure attachments contribute to the growth of a broad range of competencies, including a love of learning, a comfortable sense of oneself, positive social skills, multiple successful relationships at later ages, and a sophisticated understanding of emotions, commitment, morality, and other aspects of human relationships” (National Scientific Council on the Developing Child. (2004). *Young children develop in an environment of relationships*. Working Paper No. 1. Retrieved from <http://www.developingchild.net>)

Webinar 2: Resources & Overview

Parenting Tips

AGES 2 - 4

Special Playtime

What is the concern?

Children draw on attention from parents and work very hard to get a "connection" with you. This even includes the attention that results from undesired behaviors. While some parents believe that scolding or lecturing can teach a child to act better, this is not always the case. For many children, any attention—even scolding and reprimands that lead to an immediate connection. As a rule, any of your child's positive or negative behaviors followed by a lot of your attention will usually be repeated more often.

How can "special playtime" encourage my child's positive behaviors?

In order to increase your child's positive behaviors, you need to give attention at the right time. Break the cycle of nagging and scolding by giving your child "being good" during special, one-on-one time. A strategy called "special playtime" can be very rewarding.

First, choose a special playtime at the same time each day. For 15 minutes per day, give your child undivided attention. Turn off the phone and TV and remove other distractions. Next, if you have other children, find something for them to do during this time, like playing quietly or reading a book.

Give your child a choice of play activities and let him or her decide. If your child doesn't choose something he or she would like to do, go ahead and pick an activity. As you start to play with him, talk about it. For example, say, "I'm getting out the cars and we're going to put together the tracks to see how far they go."

Let him find them on his own, such as building blocks, cars or train sets, doll houses, toy farms, or cardboard boxes. Use toys, like a car or train set, and paper, board, or magnetic tape games. TV, board games, reading books, or games or words, and games that encourage the type of behavior you want to increase.

After your child's special playtime, you can do special playtime.

Remember, there is no "right" way to play.

Make sure to praise when your child is doing something that you want to see. If your child puts the toys away, praise the behavior by saying something like, "I love how you are putting your toys away so carefully!"

Ignore minor or annoying behavior but address disruptive behavior if your child becomes disruptive (for example, throwing toys, screaming). If the undesired behavior continues, you must stop the activity and say something like, "We will stop playing now and will play again tomorrow." If you do this once, you probably will never have to do it again.

During playtime, observe, comment, and relax. This should be an enjoyable time for both of you.

Why should I have special playtime with my child?

- Special playtime gives you and your child a chance to be kind, enjoy each other, and build your relationship.
- Playing attention to quiet, thoughtful play increases that type of play and helps your child have a longer attention span.
- Your child will learn to have a say in your normal voice and to listen when you're speaking quietly.
- Special playtime, when done again and again, will encourage positive behaviors.

Time and Predictable Schedules

What is the concern?

Children don't worry about being on time, rarely look at the clock, and frequently feel rushed, mainly because they don't develop a good sense of time until they're about age 10. Some children may really struggle with time and with making transitions from one activity to the next without predictable schedules.

Adults may easily understand the meaning of "a couple of minutes," "a few days," or "next weekend," but for the concept of time is often difficult for many children. When children don't have a good sense of time, it can lead to a good understanding of what's coming next, a normal mood, a normal nap, or lighter change in activities can lead to irritability, tantrums, or other problem behaviors.

How can I use predictable schedules to prevent my child's problem behaviors?

Routines and schedules help children to feel safe and to learn how to organize their time as they grow up. Help organize children's activities with sensible routines, including:

- Waking up**—Try to maintain the same wake-up time, or close to it, each day. We all like to sleep in on weekends, but young children usually wake up early. Someone needs to get up with your child, prepare breakfast, and set up a play space or workspace to start the schedule. Throughout the week, make sure your child goes up at the same time, even if the schedule is a little different.
- Meals**—Have meals on a schedule. For with your child is a scheduled routine or about the same time each day. This routine behavior problem overall, improves what your child eats and promotes healthy weight as the grows older.
- Routine care**—Have your child get dressed, take a bath, and do other routine care on schedule. On weekends, once up and bath, your child should get dressed at the same time as the days during the week. If your child takes a bath or shower every night, do it to do that around the same bedtime time. This will help to avoid arguments and stalling around these activities.
- Bedtime**—Keep bedtime routine consistent. Have your child get ready for bed at the same time every night. Make sure the bath, brushing teeth, getting a drink, reading, using the toilet, and lights out or quiet time are at around the same time. Do these tasks in the same order every night to help your child learn the routine and fall asleep more easily. Once your child is in bed, keep the house quiet for the next hour.
- Using a calendar**—Children understand and remember pictures better than spoken words. Get a calendar on which you can draw or put pictures of events for the coming week. Include things that don't happen every day, such as sports practices, birthday parties, and school events. Each week go over the events that will happen that week. If your child asks a lot of questions about when something will happen, show your child the calendar, and let her count the days. Use the calendar to answer "when" questions. This will help your child plan and also organize time as she gets older.

Giving Clear Directions

What is the concern?

Children often forget or simply don't follow directions they are given. Sometimes children ignore directions from parents and at times they argue and get angry.

How can I help my child follow directions?

Children often copy the actions they see in adults around them. Show your child the behaviors you want to see through your own actions. Think about how you give directions too. Sometimes children just don't understand exactly what they're supposed to do or the directions get lost within a lot of conversation.

How can I help my child listen?

- Try to give directions only when you'll be able to make sure your child follows them. If you're too busy to follow through, it might be better to wait until another time.
- Reduce distractions. For example, turn off the television or radio.
- Get closer. Position yourself about 1 to 2 feet in front of your child.
- Make eye contact and get your child's name.
- Be calm and matter of fact.
- Give your commands or directions clearly and politely. The positive commands. For example, say "Be quiet, please" rather than "Don't yell."
- If your child doesn't begin to follow the directions within about 10 seconds, calmly repeat the directions with one warning. For example, "If you don't pick up your toys, they will be gone."
- As soon as possible, praise your child for following your direction.

Reduce confusion with clarity.

1) Give one direction or command at a time.

Instead of "Please go down, brush your teeth, brush your hair, and go to the kitchen for breakfast," give one direction at a time and praise your child for each direction that is followed.

2) Use clear action words.

Use "open" or "close" directions—children may be unsure of what to do in the situation. Use "be quiet" and "walk please" instead of "be good."

3) Break complicated tasks into several, separate directions.

Although you may know exactly what you mean by "Clean your room," a child's understanding may be less clear. Tell your child exactly what you want them to do, one step at a time. For example, the tasks involved in cleaning their room may include "Make your bed," "Pick up your toys," and "Put your laundry away."

4) Use what you want your child to do rather than ask for the behavior.

Instead of asking a question, say "Come to the table to eat." Instead of "Would you like to come to dinner?"

5) Make your directions the last thing you say.

Many parents feel the need to explain things, but often times, children only remember the last thing said. Instead of saying "Get your jacket on, we need to go to the store to get a birthday present for Matthew," say "Take us, we need to get a birthday present for Matthew, please your jacket on and get in the car."

Make the Most of Playtime

Does This Sound Familiar?

Joshua (age 14 months) throws his toys up to the roof. His mother, Dorothy, picks it up, looks at it, and hands it back to him. Only seconds later, Joshua throws his toys up to the roof again, giving his mother a whole new look. Dorothy, the determined mom, then takes the toys out and puts them away. Joshua, the determined mom, then takes the toys out and puts them away. Joshua, the determined mom, then takes the toys out and puts them away.

The Focus

When you're playing with your child, it's important to focus on the behavior you want to see. When you're playing with your child, it's important to focus on the behavior you want to see. When you're playing with your child, it's important to focus on the behavior you want to see.
